

MEVOPUR® Medical Masterbatches

Thermoplastic
Clariant Corporation

Message:

Clariant offers MEVOPUR® Medical masterbatches and compounds for medical and pharmaceutical applications. Our expertise and market understanding is based on numerous years of working in these highly-demanding sectors. The result: an ever-expanding portfolio of color and functional additive compounds and masterbatches, compatible with all thermoplastic processes utilized by the industry, which combines creativity with production efficiency for our customers.

To meet preferred manufacturing processes, color is provided as color concentrate masterbatches for dilution into another polymer or as small lot pre-color compounds. Functional additives such as nucleants, clarifiers, lubricants, anti-microbial etc follow the same approach or can be added in combination with color as a 'combi' solution. The effects are not only visual. Functional additives are being introduced to improve productivity. Our product solutions cover the wide range of polymers and thermoplastic elastomers (TPEs) used in the medical and pharmaceutical sectors. These include PE, PP, COC cyclic olefins, ABS, SAN, polyester copolymers, PC/ABS, PC, PA6, 66 and 12, high performance polymers, and elastomers such as EVA, SEBS, TPU, Hytrel® and PEBA.

General Information	
Uses	Masterbatch
	Medical/Healthcare Applications
	Pharmaceuticals
