

# OMNICOLOR® Color Masterbatch

Thermoplastic  
Clariant Corporation

Message:

OMNICOLOR masterbatches are concentrates based on a multipurpose compatible carrier system. These concentrates are generally selected because of their versatility where a wide range of polymers are processed and because of their availability for sale in small quantities. The stock range has been formulated with colorants that will perform satisfactorily in most polymers under most processing conditions.

With an average use rate of 1%, one quarter the 4% use rate typical of other colorants, just a little OMNICOLOR goes a long way. OMNICOLOR color concentrates also offer outstanding color dispersion, and they perform consistently under varying processing conditions and are easy to work with. OMNICOLOR masterbatches can be ordered off the shelf in small or large quantities and if you need a color outside the stock range, Clariant can create a custom formulation, based on our multipurpose OMNICOLOR carrier.
