

Exxon™ IT0316

Ethylene Propylene Copolymer Rubber

ExxonMobil Chemical

Message:

Exxon IT0316 is an ethylene-propylene copolymer with good elasticity, which can be used as a processing additive in EPDM rubber formulations. In the case where the usage amount does not exceed 10phr, it can improve the fluidity of the rubber compound in the extrusion mold to increase the extrusion speed, and has little influence on the final performance of the vulcanized product. It can also be used in the butyl rubber/EPDM rubber formula of the inner tube, which can improve the self-adhesive and raw rubber strength.
