Fluoroelastomer

Shandong Huaxia Shenzhou New Material Co., Ltd.

Message:

Fluorous rubber (FKM-DS2600), commonly called 2# rubber, is white elastomer and copolymer of VDF and hexafluoropropylene, with fluorine content of over 66%. The product processed and vulcanized by raw fluorous rubber (DS2600), featured by good mechanical property and excellent oil resistance (fuels, synthetic oils, lubricating oils) and heat resistance, is an indispensable material for modern aviation, rocket, missile, space flight, and other top technologies and industries.

Characteristic: Medium and high Mooney viscosity, good ductility Application: Mixing diaphragms, oil seals, extrusion hoses, etc.
