Nipol® 1041L

Acrylonitrile Butadiene Rubber

Zeon Chemicals L.P.

Message:

NIPOL® NITRILE ELASTOMERS (NBR) are recommended when oil or solvent resistance is needed for the proper functioning of rubber parts. Nipol nitrile elastomers are available in a broad range of acrylonitrile content to ensure optimal performance in a variety of conditions. As acrylonitrile content is increased, fuel, oil and solvent resistance improve; low-temperature flexibility and resiliency are improved as butadiene content increases. To obtain a broad spectrum of hardnesses and other essential properties, Nipol elastomers can be blended to achieve optimal performance. Nipol elastomers are the best value for all but the most demanding oil, heat and chemical applications and are available in powder, crumb, liquid and bale forms. Nipol nitrile elastomers are especially suitable for thermoplastics and thermoset modification; they are also used as additives in coatings and adhesives. Special Properties/Applications

Special-purpose, intermediate-Mooney-viscosity nitrile rubber. Combines excellent physical properties and processability with very high oil resistance. Recommended for oil field parts and other applications requiring high oil resistance.

General Information		
Features	Good Processability	
	Medium Viscosity	
	Oil Resistant	
	Solvent Resistant	
Uses	Additive	
	Oil/Gas Applications	
	Plastics Modification	
Forms	Bale	
	Crumb	
	Liquid	
	Powder	
Physical	Nominal Value	Unit
Specific Gravity	0.998	g/cm³
Mooney Viscosity	58 to 68	MU
