NuSil MED-6350

Silicone

NuSil Technology

Message:

NuSil Technology's restricted materials may be considered for use in short-term implant applications, 29 days or less, or for external applications. A silicone gel is an unreinforced, loosely crosslinked network of polymers. Due to the lack of reinforcing filler, gels tend to be low in viscosity in the uncured state, allowing flexibility for various processing techniques. Not only can the crosslink density of the silicone polymers be designed to yield a very firm or soft gel, but the work time and cure profile can also be modified. Accordingly, gels can be used in a variety of applications, including sheeting and encapsulating sensors or electronic devices. Additionally, NuSil's restricted tacky gels can be used as temporary adhesives.

Comments: LOW PENETRATION, MEDIUM TACK GEL

General Information			
Features	Biocompatible		
	Breathable		
	Low Viscosity		
	Adhesives		
	Electrical/Electronic Applications		
	Medical/Healthcare Applications		
Agency Ratings	USP Class VI		
Forms	Gel		
Processing Method	Encapsulating		
Thermoset	Nominal Value	Unit	
Thermoset Components			
Part A	Mix Ratio by Weight: 1.0		
Part B	Mix Ratio by Weight: 1.0		
Additional Information	Nominal Value	Unit	
Cure System	Platinum		
Penetration Depth ¹	1.70	mm	
Uncured Properties	Nominal Value	Unit	
Viscosity	22	Pa·s	
Curing Time (100°C)	0.50	hr	
Pot Life (25°C)	120	min	
NOTE			
	Shaft Weight/Foot Diameter/Time :		
1.	19.5g/6.35mm/15s
