## Eltex® P KS407HP

# Polypropylene Random Copolymer INEOS Olefins & Polymers Europe

#### Message:

Polypropylene - Heat Seal

Benefits & Features

Eltex® P KS407HP is a modified random copolymer with a high ethylene content, developed for use primarily as the sealing layer in "coextruded bioriented metallisable film". It contains no technical additives and is thus particularly appreciated by users wishing to use their own "formulas". Its stabilisation package has been especially designed for metallisable film applications.

Good metal adhesion

Good processability on high speed BOPP lines

Longer Corona surface treatment retention

Applications

1.

Sealing layers for further converting operations (metallisation, lamination, printing).
